

CENTAURUS 360

STRATEGIC INVESTMENT, MODERNISATION AND DEVELOPMENT PROGRAMME OF THE CENTAURUS FOUNDATION

Implementation period: 15 October 2026 – 31 December 2029

**INVESTMENT AND DEVELOPMENT PROGRAMME FUNDING TARGET:
PLN 270,000,000**

Better living conditions. Smarter infrastructure. Lasting change.

1. OUR MISSION AND VISION FOR THE FUTURE

Every day, we care for animals that have suffered abuse, neglect, illness or abandonment. For many, our facilities are **their first place of safety**. For others, they become **a home for life**.

Every rescued animal's story highlights the need for something lasting: a safe environment, functional facilities and solutions that will serve animals for years to come.

2,000+
animals in our care

nearly 1,500
horses and donkeys

1,000 ha
centres and nature reserves

Our daily care never stops. This document, however, concerns a different form of support: **investments that will improve the quality of care** and expand the Foundation's capacity.

We are creating safer conditions for animals, every day.

CENTAURUS 360 sets out a broad vision for the Foundation's future. The **PLN 270 million presented here relates exclusively to investment and development**: upgrading our centres, expanding infrastructure, educational programmes, technology and new social initiatives.

We invite businesses to help deliver **specific projects with defined objectives, scope, implementation stages and arrangements for reporting outcomes**.

The investment and development plan comprises eight pillars and runs until 31 December 2029.

The overall CENTAURUS 360 concept envisages **PLN 360 million in funding**: a separate allocation of **PLN 90 million for ongoing operations** and **PLN 270 million for the investments and development programmes** described below.

PLN 360m	Overall CENTAURUS 360 plan: investment and development funding plus a separate allocation for ongoing operations
PLN 90m	Ongoing animal care, veterinary treatment and Foundation operations — NOT COVERED BY THIS DOCUMENT
PLN 270m	SCOPE OF THIS DOCUMENT: renovations, upgrades, infrastructure, education, technology, development and international projects

We are seeking partners who want to fund lasting, verifiable outcomes: better buildings and animal enclosures, new infrastructure, meaningful education and solutions that protect animals.

2. CENTAURUS 360 — EIGHT PILLARS OF INVESTMENT AND DEVELOPMENT

The eight areas form a coherent portfolio of initiatives. Every zloty allocated below is intended to fund a new project, investment, upgrade or separately defined development programme.

Pillar	Primary objective	Planned funding allocation
I. Centre modernisation	Renovations and lasting infrastructure improvements, excluding investments in Modlimowo	PLN 100,000,000
II. Modlimowo expansion	Land, buildings, shelters, education centres and supporting infrastructure	PLN 50,000,000
III. Education and inclusion	Launch and expansion of new educational and social programmes	PLN 45,000,000
IV. Technology and new initiatives	Development of the ANIMALITY platform and a charitable marketplace	PLN 35,000,000
V. Rehabilitation and welfare	Establishment of the CENTAURUS NATURAL HEALING CENTER	PLN 13,000,000
VI. Adoption infrastructure	New facilities and programmes to prepare animals for adoption	PLN 4,000,000

Pillar	Primary objective	Planned funding allocation
VII. International projects	Conservation infrastructure, education and new species protection projects	PLN 12,000,000
VIII. Investment contingency	Contingency funding for the delivery and risks of specific investments	PLN 11,000,000
TOTAL		PLN 270,000,000

The pillar budgets are indicative planning figures (as at October 2026). In particular, the allocation for Pillar I is a provisional modernisation portfolio budget, subject to technical audits, cost estimates and final approval of the scope of work.

3. PILLAR I – CENTRE INFRASTRUCTURE: MODERNISATION AND SAFETY

PLANNED FUNDING ALLOCATION: PLN 100,000,000

Rescuing an animal is only the beginning of our responsibility. That is why we want to invest in **lasting living conditions**: functional shelters, safe spaces, reliable utilities and facilities tailored to the animals in our care.

Pillar I covers the upgrading, refurbishment and development of the Foundation's existing facilities, excluding investments listed separately under Pillar II (Modlimowo).

Priority will be given to projects that address infrastructure deficiencies, improve animal safety and welfare, and extend the useful life of buildings, enclosures and equipment.

The PLN 100 million figure is a **provisional ceiling for the modernisation portfolio** in this version of the plan, not an approved cost estimate for specified construction works. Individual projects and budgets will be established following technical surveys and preparation of investment documentation.

Each project will specify the scope of work, implementation cost, timetable and lasting benefits for animals. Priorities will be based on actual needs and the condition of existing facilities.

Main areas of modernisation

Area	Benefits for animals
Building renovations and adaptations	Safer stables, shelters, care areas and technical facilities

Area	Benefits for animals
Upgrades to utility systems	Lasting improvements to ventilation, electrical, heating and sanitation systems
Fire safety	Upgraded alarm systems, evacuation routes and building safety measures
Water and resource management	Upgraded water networks, water retention systems and farm utilities
Enclosures and fencing	Durable fencing replacements, improved ground surfaces and safer animal areas
Storage and permanent facilities	Construction and adaptation of permanent storage facilities to protect equipment
Accessibility and welfare	Spaces adapted for older, sick or injured animals
Energy efficiency	Thermal upgrades and permanent energy-saving measures

A partner does not fund undefined expenses. It supports **a specific facility, construction phase or modernisation programme with measurable results.**

4. PILLAR II – EXPANSION OF THE MAIN CENTRE IN MODLIMOWO

PLANNED FUNDING ALLOCATION: PLN 50,000,000

Expanding the Modlimowo centre is one of the Foundation's flagship infrastructure projects.

The aim is to bring safe animal care, education, volunteering and environmental activities together in one location.

The Modlimowo site currently includes approximately 140 hectares of fenced land.

The plan envisages gradually acquiring additional land and developing infrastructure to streamline care operations and reduce unnecessary logistics costs.

4.1. Acquisition of additional land

Estimated investment value: PLN 15,000,000

Over time, this would allow selected Foundation activities to be consolidated, animals to be transferred from other locations and logistics and transport costs to be reduced.

A larger site would provide safe areas for animals alongside dedicated spaces for education, volunteering and environmental activities.

The future consolidation of certain functions could also support more efficient use of the Foundation's infrastructure.

4.2. Construction of 30 animal shelters and covered structures

Estimated investment value: PLN 6,000,000

Animals living across extensive grounds need effective protection from rain, snow, wind and excessive sunshine.

We plan to construct 30 additional covered structures.

The estimated cost of each structure, including ground preparation, is approximately PLN 200,000.

The new facilities would improve living conditions, particularly for older, weakened animals and those needing additional protection.

4.3. Cat Care and Neutering Centre – Building A

Estimated investment value: PLN 6,000,000–8,000,000

We plan to renovate an existing building and transform it into a professional cat care centre.

The facility could include:

Safe accommodation for cats	Veterinary outpatient clinic
Spaying and neutering facilities	Recovery areas
Separate rooms for animals requiring isolation	Secure outdoor runs and cat enclosures
Areas to prepare animals for adoption	

The centre could also support broader programmes aimed at humanely reducing the number of homeless cats.

4.4. Education, Community and Events Centre – Building B

Estimated investment value: PLN 6,000,000–8,000,000

We would like to establish a year-round educational and community facility for children, young people, families, volunteers and the Foundation's partners.

We envisage workshops, training courses, environmental events, community activities and programmes for children from residential care institutions.

The centre could also serve businesses running employee volunteering programmes and corporate social responsibility initiatives.

4.5. Volunteer Centre – Building C

Estimated investment value: PLN 6,000,000–8,000,000

We plan to refurbish an existing outbuilding to create a multifunctional space comprising:

Year-round volunteer accommodation	Bathrooms, showers and welfare facilities
Shared kitchen	Classrooms and workshop spaces
Storage rooms	Meeting and collaborative workspaces
Selected animal care rooms	

Our aim is to develop international volunteering opportunities that combine hands-on animal care with education and environmental action.

4.6. New village for dogs

Estimated investment value: PLN 500,000

We would like to create a new home for approximately 30 dogs, with individual kennels, fenced exercise areas, shaded spaces and supporting facilities.

We want to provide a more natural, welcoming environment than conventional shelter kennels.

4.7. Veterinary isolation units

Estimated investment value: PLN 100,000

We plan to build properly equipped spaces for animals that need to be separated for health reasons.

These isolation units would improve biosecurity and the organisation of veterinary care.

4.8. Facilities for horse training and rehabilitation

Estimated investment value: PLN 950,000–1,150,000

The project includes:

Investment	Estimated value
Two horse walkers for controlled exercise	PLN 200,000–400,000
Indoor riding arena	PLN 500,000
Outdoor riding arena	PLN 250,000

These facilities would support regular handling and training, socialisation, rehabilitation exercises and preparation for adoption.

4.9. Hay and feed storage facility

Estimated investment value: PLN 1,000,000

We plan to construct a large, roofed storage building.

This would allow larger feed reserves to be stored safely, reduce moisture-related losses and improve delivery planning.

4.10. Eco-village of clay-built houses

Estimated investment value: PLN 3,500,000

One of the most distinctive elements of our vision is an eco-village of approximately 30 houses built from natural materials.

The village could accommodate volunteers, workshop participants, visitors and Foundation partners.

We want it to become a model of responsible construction, community cooperation and living in harmony with nature.

An alternative would be to establish a year-round site with approximately 50 modular cabins, at an estimated cost of PLN 3 million.

4.11. Other infrastructure

Investment	Estimated value
Forest Ropes Course expansion — one additional route	PLN 150,000–200,000
Year-round sanitary facilities	PLN 200,000
Kitchen and workshop space upgrades	PLN 300,000–400,000
Professional feeding racks	PLN 12,000–15,000 per item
Specialist hay nets	PLN 200–500 per item

These investments are designed to improve how the Modlimowo centre operates, animal safety and the facilities available for educational programmes. Their budgets do not include the centre's normal operating costs.

The indicative value of the proposed investments in Modlimowo is approximately PLN 45.7–52.05 million (October 2026), assuming one additional ropes-course route and the clay-house village option. Project cost estimates will be verified before work begins.

The planned PLN 50 million allocation will be directed towards these investments in stages, based on approved scopes of work and verified cost estimates.

5. PILLAR III – NATIONWIDE EDUCATION AND SOCIAL INCLUSION

PLANNED FUNDING ALLOCATION: PLN 45,000,000

Education can help prevent cruelty and neglect before animals suffer the consequences.

This pillar finances the creation and delivery of new, separately defined educational programmes.

5.1. Nationwide "Empathy" programme

We plan to create an educational programme for children and young people that nurtures compassion, responsibility, cooperation and respect for other living beings.

The programme would include:

Recognising one's own and others' emotions	Building empathy for animals and people
Preventing cruelty to animals	Preventing bullying and peer violence

Learning to interact safely with animals	Responding responsibly to harm
Promoting cooperation and care within communities	

Ultimately, we aim to deliver the programme in partnership with schools throughout Poland.

5.2. Nationwide network of educators

We intend to establish a network of educators and a new programme of classes delivered under separate project schedules and budgets.

The preliminary cost model assumes an average of 40 educators per participating city. The scale of each programme cycle must reflect the funding approved for that project.

Number of cities	Estimated monthly cost	Estimated annual cost
1	PLN 170,000	PLN 2,040,000
5	PLN 850,000	PLN 10,200,000
10	PLN 1,700,000	PLN 20,400,000

The figures illustrate only the cost of delivering additional educational activities (project staff and materials). They do not imply that all scenarios would be launched simultaneously.

Individual programme cycles will be introduced in stages, according to school interest, educational needs and the funding granted for each programme.

5.3. "Empathy Through Cooperation"

Estimated cost of one nationwide programme cycle: PLN 250,000–300,000

We would like to create a distinctive educational event centred on cooperative games.

Instead of conventional competition, we propose collaborative problem-solving, team games and activities built around cooperation.

We want children to discover that success does not always mean defeating others; often, it means achieving something together.

5.4. Educational visits for children in residential care

Estimated cost per visit: PLN 10,000

We would like to welcome children regularly to our centres, where they can meet rescued animals and take part in thoughtfully designed activities.

The programme would include nature-based, educational and community-building workshops.

Visits per month	Estimated annual cost
4	PLN 480,000
10	PLN 1,200,000
20	PLN 2,400,000

Meeting animals, learning their stories and participating in responsible care activities can offer valuable educational and social experiences.

6. PILLAR IV – TECHNOLOGY AND INCOME-GENERATING INITIATIVES

PLANNED FUNDING ALLOCATION: PLN 35,000,000

The technology pillar covers the development of new tools and initiatives with the potential to generate their own income after launch, supporting the Foundation's charitable activities in the future.

6.1. ANIMALITY – international education and community platform

Estimated investment value: PLN 30,000,000

ANIMALITY is a proposed international digital platform combining education, animal protection, high-quality film content and community engagement.

The aim is to combine valuable content, education and community engagement with tangible support for animal protection.

The project includes:

**International documentary and educational
film library**

**Content about animals, nature and the
environment**

Reports on interventions and rescue operations	Live broadcasts from animal care centres
Global network of environmentally responsible animal rescue sites	Ambassador programme
Individual and corporate subscriptions	Collaboration with experts, organisations and digital creators

We want businesses to be able to fund access to valuable educational content for their employees and their families.

Potential subscription revenue would form part of the platform's future business model and help fund the Foundation's mission.

6.2. "SECOND LIFE – SECOND CHANCE"

Estimated implementation cost: PLN 5,000,000 for development and launch

We plan to establish a European charitable online marketplace selling items donated by businesses and individuals.

Items that their owners no longer need can be given a second life, with proceeds from their sale supporting animal rescue.

The project would include:

Online marketplace	Refurbishment and repair centre
Warehouses and logistics facilities	System for accepting donated goods
European partner network	Volunteer programmes
Educational campaigns on responsible consumption	

Development and launch budget

Area	Estimated value
Online platform	PLN 900,000
Refurbishment centre	PLN 700,000
Warehouses and infrastructure	PLN 600,000

Area	Estimated value
Project implementation team (development phase)	PLN 1,300,000
Launch campaign and educational materials	PLN 700,000
Logistics launch and operational pilot	PLN 400,000
Testing, acceptance and implementation contingency	PLN 400,000
TOTAL	PLN 5,000,000

In the future, the marketplace's commercial success could generate additional income for the Foundation's charitable purposes. This pillar, however, finances only the creation and launch of the new initiative.

7. PILLAR V – CENTAURUS NATURAL HEALING CENTER

CENTRE FOR NATURAL THERAPIES, REHABILITATION AND ANIMAL WELLBEING

PLANNED FUNDING ALLOCATION: PLN 13,000,000

Estimated investment range: PLN 10,000,000–15,000,000

The CENTAURUS NATURAL HEALING CENTER is a proposed facility supporting animal rehabilitation, recovery and wellbeing.

The planned centre would provide a peaceful setting for carefully selected rehabilitation, recovery and educational programmes.

The centre is not intended to replace conventional veterinary treatment.

Its role would be to complement veterinary care with methods selected to meet each animal's needs, always prioritising safety and welfare.

7.1. Proposed range of services

Area	Illustrative methods and activities
Manual therapies	Massage, soft tissue techniques and selected mobilisation methods
Movement rehabilitation	Therapeutic exercise, balance training and proprioception
Hydrotherapy	Underwater treadmill and aquatic exercise

Area	Illustrative methods and activities
Physical therapy	Laser therapy and selected applications of electrotherapy, ultrasound and thermotherapy
Complementary methods	Individually assessed methods to support comfort and wellbeing
Recovery programmes	Individually tailored stays and activities
Education	Workshops for carers, training courses and specialist meetings

The concept also considers animal osteopathy, veterinary acupuncture, acupressure, herbal medicine and selected relaxation techniques, among other approaches.

Each method will be assessed for safety, staff qualifications and available scientific evidence. Methods without demonstrated effectiveness will not replace veterinary treatment.

7.2. Normobaric chamber

Estimated investment value: PLN 2,000,000–3,000,000

One option under consideration is a specialist normobaric chamber designed with the needs and safety of animals in mind.

Before any investment decision, technical and veterinary assessments and an independent safety evaluation of its use with animals will be required.

Any use of the equipment will depend on the findings of these assessments and its practical suitability for animals.

7.3. Property and infrastructure

We plan to acquire a property in a peaceful setting, with access to green spaces and sufficient room for animals.

The centre could include:

Manual therapy rooms	Rehabilitation and physical therapy rooms
Hydrotherapy room	Exercise and recovery rooms
Separate accommodation areas for dogs and cats	Outdoor cat enclosure
Fenced gardens and exercise areas	Rest areas

Training rooms

Technical facilities, reception and parking

7.4. Education and training centre

Education is intended to be an important part of the centre's work.

We would like to organise courses and workshops led by appropriately qualified specialists from Poland and abroad.

Potential topics include animal anatomy and biomechanics, rehabilitation, safe massage techniques, the welfare of older animals, stress reduction and environmental enrichment.

7.5. Self-financing model

The centre could generate income from:

Individual rehabilitation and recovery services	Animal boarding
Welfare support programmes	Workshops for animal owners
Specialist courses	International training courses
Partnership and sponsorship programmes	

The centre is intended to become self-financing after launch. This budget covers capital expenditure and pre-opening costs, not its subsequent day-to-day running costs.

7.6. Indicative capital budget

Category	Value
Property and land acquisition	PLN 3,000,000
Building adaptation	PLN 2,000,000
Normobaric chamber	PLN 2,500,000
Treatment room equipment	PLN 1,000,000
Hydrotherapy and rehabilitation	PLN 900,000
Animal accommodation areas	PLN 600,000
Cat enclosure, fencing and exercise areas	PLN 500,000

Category	Value
Parking and landscaping	PLN 400,000
Training rooms	PLN 400,000
IT infrastructure and booking system	PLN 200,000
Centre set-up and launch	PLN 500,000
Investment contingency and inspection costs	PLN 1,000,000
TOTAL	PLN 13,000,000

Indicative budget as at October 2026

8. PILLAR VI – ADOPTION PREPARATION FACILITIES AND PROGRAMMES

PLANNED FUNDING ALLOCATION: PLN 4,000,000

Safe adoption requires suitable facilities and specialist preparation. The plan includes creating new training areas and a programme to develop the skills of our teams and prospective adopters.

Animals that have had difficult experiences need calm surroundings and individual attention. Improving facilities and developing appropriate adoption preparation methods can improve their chances of finding new homes.

Funding under this pillar will cover the adaptation of facilities, equipment purchases, preparation of materials and the launch of new, separately organised training and adoption programme cycles.

8.1. Facilities and adoption preparation programme for horses

We want to create or adapt areas for working safely with horses and introduce a specialist-designed pilot programme to prepare them for adoption.

The new programme could include:

Gradually building trust in people	Preparing horses for everyday handling
Safe leading and handling	Individual socialisation programmes
Preparing horses for transport	Supporting adoption processes

The programme will be based on welfare-led methods that respect each animal's pace of learning and ensure handler safety.

8.2. Facilities and adoption preparation programme for dogs

We plan to establish areas for behavioural work and a dedicated adjustment programme for dogs, including those experiencing fear or anxiety.

The project could include:

Assessing each animal's individual needs	Reducing stress
Building a sense of safety	Working with fearful or traumatised dogs
Preparing animals for life with adoptive families	Supporting new carers

8.3. Scope of investments and development programmes

Area	Expected outcome	Funding basis
New infrastructure	Adapted areas for safely preparing animals	Design documentation and construction cost estimate
Specialist equipment	Devices, partitions, safeguards and durable fittings	Specifications and project procurement
Pilot programmes	Separately organised training and adoption preparation cycles	Budget and schedule for each programme cycle

The PLN 4 million is a programme allocation. Its division between infrastructure works, equipment and new programme cycles will be determined by a detailed project plan.

Well-designed adoption preparation facilities will give more animals the opportunity to build safe, lasting relationships with new families.

9. PILLAR VII – INTERNATIONAL ANIMAL PROTECTION PROJECTS

PLANNED FUNDING ALLOCATION: PLN 12,000,000

Protecting animals also requires cooperation beyond Poland's borders.

This pillar covers new, separately defined nature and animal protection projects delivered with international partners, with particular emphasis on infrastructure, education and developing local capabilities.

9.1. "Animals Without Borders"

Working with local partners, we are considering the development and piloting of educational approaches and infrastructure to support responsible programmes addressing stray and homeless animals.

Any programmes will be launched only after their objectives, partnership arrangements, project budgets and methods of measuring lasting outcomes have been agreed.

9.2. Bonobo reserve in the Democratic Republic of the Congo

For the bonobo initiative, we are considering helping develop habitat protection infrastructure, educational facilities and technical solutions for monitoring threats.

Potential investments include:

Protection and observation infrastructure	Technical facilities and systems to minimise habitat threats
Environmental monitoring	Measurement equipment and observation systems
Education and local cooperation	Development of new programmes and educational materials
Feasibility studies and project designs	Documentation, legal analysis and impact assessment of proposed activities

The project remains at the concept stage. Any funding would first require a feasibility study, agreement on local partners' roles, an assessment of the legal framework and a separate capital budget.

The future reserve's operating costs are not included in the PLN 12 million allocation and would require a separate financing model.

This pillar may fund the preparation and implementation of new infrastructure projects, species conservation programmes and educational initiatives.

10. PILLAR VIII – INVESTMENT AND PROJECT CONTINGENCY FUND

PLANNED FUNDING ALLOCATION: PLN 11,000,000

A responsible investment programme needs a contingency fund for issues that only emerge during design, renovation or construction.

The fund will cover unforeseen construction work, changes in technical requirements, additional surveys and justified cost increases relating to specific investments.

The contingency fund may be used only for:

Unforeseen modernisation work	Additional works identified after construction begins
Additional documentation and studies	Expert assessments, revised designs and required approvals
Compliance with infrastructure standards	Unplanned safety measures, accessibility and technical requirements

Every release of contingency funding will be linked to a documented investment project, a clear justification, an approved budget and a funding decision.

11. IMPLEMENTATION TIMELINE FOR INVESTMENTS AND PROGRAMMES

Project period: 15 October 2026 – 31 December 2029

Phase	Period	Main activities
I. Portfolio preparation	Q4 2026	Infrastructure audit, needs assessment, project concepts and investment partnerships
II. Initial delivery	2027	Start of approved upgrades, construction and new educational programmes
III. Project expansion	2028	Continued Modlimowo development, ANIMALITY and marketplace projects, and adoption programmes
IV. Completion and scaling	2029	Completion inspections, outcome evaluation, expansion of successful projects and planning the next phase

Implementation will be phased and will depend on the readiness of project documentation, technical schedules, regulatory approvals, partners' capacity and funding allocated to each investment.

12. HOW CAN BUSINESSES JOIN CENTAURUS 360?

Partnership does not require a commitment to the full PLN 270 million. A business can select one building, a particular investment stage, a specific education programme or a technology deployment.

A company can support a project aligned with its expertise and social responsibility strategy – for example, upgrading a building, extending an animal enclosure, delivering an educational programme or developing a new platform.

The most valuable partnerships clearly define what will be delivered, the resources required and how results will be documented.

Proposed partnership models

Partnership model	Potential contribution
Strategic partner	Multi-year support for selected programme pillars
Lead investment partner	Funding for a specific investment
Education partner	Funding for the "Empathy" programme and classes
Technology partner	Development of ANIMALITY, the marketplace and IT tools

Partnership model	Potential contribution
Infrastructure partner	Construction materials, equipment and building work
In-kind partner	Donations of building materials, machinery and durable equipment
Regional modernisation partner	Funding for construction and lasting improvements at a designated centre
Employee engagement partner	Construction or specialist volunteering and participation in new educational programmes
International partner	Support for animal protection projects outside Poland

We will agree the partnership structure individually, taking account of the company's capabilities, the project's readiness and its implementation schedule.

What could a partnership look like in practice?

Business sector	Example contribution
Construction	Materials for shelters and infrastructure
Transport and logistics	Delivery of materials and infrastructure components to construction sites
Technology	Support for the development of ANIMALITY
Agriculture and agricultural technology	Solutions for permanent feed storage, water retention and site infrastructure
Finance	Funding for a selected investment
Employee teams	Volunteering and educational activities

A company's contribution can leave a lasting legacy: a new safe space, an upgraded building, an educational programme or a technology solution that benefits future generations.

13. TRANSPARENT PARTNERSHIPS AND RESPONSIBLE MANAGEMENT

A board-level decision to support a charitable cause calls for the same transparency as any other investment decision: a clear objective, a defined amount and a process for monitoring progress.

Every partnership will be structured around an agreed funding scope, delivery schedule and arrangements for documenting expenditure and outcomes.

Individually agreed partnerships may include:

Defining the objectives and scope of the funded project	Agreeing the value and timing of support
Defining delivery milestones	Documenting the use of funds
Providing periodic progress reports	Agreeing partnership communication and visibility arrangements
Defining measurable social and operational outcomes	

Examples of outcome indicators

Area	Illustrative indicator
Safe environments	Number and size of upgraded animal areas
Adoptions	Number of prepared facilities and participants in new adoption programmes
Infrastructure	Number of newly built or upgraded facilities
Education	Number of schools, pupils and sessions delivered
Volunteering	Number of participants and completed programmes
Technology	Platform implementation progress and number of users
Partnerships	Value and scope of funding secured for specific projects
Animal welfare	Improvements to animal living conditions and access to new facilities

Partners will be able to agree indicators relevant to each investment or programme. Intended outcomes will not be presented as achieved before they have actually been delivered.

14. WHY PARTNER WITH THE CENTAURUS FOUNDATION?

Taking part in the programme offers a way to align corporate social responsibility with initiatives that deliver long-term benefits across infrastructure, education, technology and the environment.

A partner may co-finance the renovation of stables, the construction of shelters, the launch of an education centre or the deployment of a tool that helps protect animals.

Every investment can bring about tangible change: safer surroundings, greater access to specialist care or new knowledge that helps prevent suffering.

Funded objective	What changes in practice
Shelters and covered structures	Protecting animals from harsh weather conditions
Hay storage	Safely storing animal feed
"Empathy" education programme	Helping to shape attitudes and responsible behaviour
Specialist work with horses and dogs	Better preparation for safe adoption

The value of a partnership is reflected in completed facilities, programmes put into operation and reliably documented results.

15. AN INVITATION TO PARTNER WITH US

Dear Prospective Partners,

Every project begins with a question: how can we create conditions that not only help animals today but remain safe and fit for purpose for many years to come?

We invite you to choose an investment or development programme that best reflects your organisation's values and capabilities.

We will present the project's scope, indicative budget, implementation stages and a proposal for documenting outcomes. You may fund an entire project or an agreed phase.

Your decision can help create safer buildings, better-equipped spaces and knowledge that will protect animals for years to come.

CONTACT – STRATEGIC PARTNERSHIPS

Anna Korzeniewska

Director of Strategic Partnerships

Centaurus Foundation Phone: +48 537 586 272, Email: anna.korzeniewska@centaurus.org.pl

Please contact me directly to discuss a specific investment or development programme. Together, we can define a practical partnership scope and agree how to make it happen.
